

Overview

You need to:

- Maintain your competitive edge by helping your employees sharpen their technical skills.
- Leverage the benefits of your significant technical investments.
- Quickly implement Informix technologies.
- Reduce operating errors.
- Retain valued employees.

Why Custom Training Works:

- Technical experts focus specifically on your implementation and development projects.
- It gives employees the knowledge they need when they need it.
- It saves money by training multiple employees simultaneously—in class or online.
- Training is more efficient and effective when it's targeted.

Why Xtivia:

- As your business partner, we are fully committed to your business success.
- Our expert trainers possess unsurpassed technical skills coupled with extensive business experience.
- Our customized coursework paired with practical exercises is a proven training delivery method.

Training That Meets Your Needs

You get the right course fit.

We work with you to determine your needs and deliver training that fits. We offer the following training options:

- **Instructor-Led Training:** At your site or ours, we can provide off-the-shelf or customized Informix training with hands-on practice and application. Classroom training is highly preferable for intense topics such as internals and performance tuning when hands-on labs are beneficial.
- **eLearning:** We can also provide customized Web-based learning with practical demonstrations and simulations based on your system configuration. When you need training at different locations or with larger populations, eLearning can be a cost-effective method to get everyone up to speed efficiently.
- **One-on-one Mentoring:** For those circumstances where you have one or two employees who need Informix coaching, our one-on-one mentoring provides customized education to meet individual needs. Extremely flexible in design, we'll work with you to determine the appropriate length, structure, and schedule.
- **Consulting + Training:** Consider adding Informix training to your consulting engagement. Following these assignments, our knowledgeable engineers will have first-hand knowledge of your environment and can deliver the training your team needs within this context.

Learning is personalized.

One of the major benefits of utilizing the team of Xtivia trainers is their "flexibility" in course delivery, without compromising the overall learning goals and objectives. With extensive Informix product technical knowledge, topics can be added "on the fly" when needed to bring better understanding and comprehension to a topic area. It is also common for the Xtivia trainer to ask a student to "further describe" their working or application environment, and then the content can be tailored towards their everyday environment, enhancing the learning experience in a personal manner.

Learning effectiveness is ensured.

Each of our courses delivers specific skills by job role. Hands-on labs and/or practical simulations reinforce the core instruction—maximizing your team's learning experience. Xtivia's experienced instructors pair comprehensive, hands-on technical skills with effective facilitation and coaching techniques.

You pay for what you need.

For most courses, we offer two-tiered pricing: small group (up to 5 students) or standard group (up to 10 students). For greater cost savings, you can sponsor a course at your location. We'll combine it with the appropriate amount of consultation for your specific needs. You simply invite other companies and advertise the training. And on top of the cost savings, the best practices and "real life stories" shared between the participating companies will enhance your learning experience. Additionally, as mentioned above, one-on-one mentoring can also be provided to meet your individual training needs in a cost-effective manner.

Expertise you can leverage.

The Xtivia Informix team has deep experience, including several members who have previously worked directly for Informix. Our team has extensive functional and technical experience, working with our clients to assist with day-to-day administration for our Virtual-DBA service, troubleshooting, performance tuning, migrations, upgrades, design, and application development and tuning. Additionally, our expertise includes the use and knowledge of almost all Informix products, and our consultants have taught classes in Informix internals, performance tuning, administration, and 4GL development. This puts them in the perfect position to provide you with deep knowledge you can leverage to more effectively manage your Informix technology.

Informix Training Topics

- Structured Query Language
- Stored Procedures and Triggers
- Application Development with 4GL
- Application Tuning
- Relational Database Design
- Database Administration
- Informix Dynamic Server (IDS)
- Informix Extended Parallel Server (XPS)
- Informix Standard Engine (SE)
- IBM Informix Embedded Structured Query Language for C (ESQL/C)
- Internal Architecture
- Backup and Restore
- Performance Tuning
- Replication
- Troubleshooting
- New Features/New Releases
